## Skill/Education

Xinxiang University

Bachelor of Engineering in Computer Science and Technology | Sep 2024 – Jul 2026

Programming Languages: Java, JavaScript, Python, PHP, C++, C#

Frameworks: React, Spring Boot, Django

Development Tools: Git, Docker, Linux, Nginx, VS Code

AI Technologies: LLM Applications, RAG, GraphRAG, AI Agents

AI Coding Tools: OpenAI Codex, Cursor, Windsurf, Lingma, Trae

## Internship/Project Experience

### Software Engineer Intern

Henan Guangyu Construction Group | Mar 2026 – Apr 2026

- Designed a private AI infrastructure for secure enterprise knowledge management.
- Built a GraphRAG-based knowledge retrieval system for internal documents.
- Planned GPU resources, reducing projected infrastructure costs by over 60%.

Huzhou Shunuo Biotechnology Co., Ltd. | May 2026 – Present

- Developed an AI voice interviewing platform, reducing candidate screening time by 80%.
- Built an AI talent search system with resume analysis and intelligent candidate matching.
- Developed internal enterprise platforms for API management and recruitment automation.
- Designed an AI gateway for model routing, usage tracking, and cost management.
- Built AI-powered presentation generation tools for enterprise templates.

## Independent Projects

### Full-Stack Development

- Built enterprise web applications using React, Spring Boot, and PHP.
- Developed reusable dashboards, forms, and data visualization components.
- Managed the complete development lifecycle from design to deployment.
- Deployed production services on Linux using Docker and Nginx.

### AI Infrastructure

- Deployed local LLM inference services using Ollama.
- Built containerized AI services with Docker.
- Implemented GPU monitoring and performance optimization.
